MOCK TEST

PROGRAM:

```
N = int(input("Enter number of students: "))
total_marks = 0
pass_students = 0
fail_students = 0
for i in range(N):
    mark = int(input(f"Enter mark of student {i+1}: "))
    if 0 <= mark <= 100:
        total_marks += mark
        if mark >= 40:
            pass_students += 1
        else:
            fail_students += 1
    else:
        print("Please enter between 0 and 100")
        break
```

```
average_marks = total_marks / N
print("Total Marks:", total_marks)
print("Average Marks:", average_marks)
print("Passed Students:", pass_students)
print("Failed Students:", fail_students)
```

OUTPUT:

```
Enter number of students: 3
Enter mark of student 1: 20
Enter mark of student 2: 100
Enter mark of student 3: 55
Total Marks: 175
Average Marks: 58.333333333333336
Passed Students: 2
Failed Students: 1
```

Time Complexity: O(n) -> We traverse all students once

Space Complexity: O(1) -> Only few variables used

GIT COMMANDS:

$ git add .

git commit -m "studentmark"

git push
